

TOY AUTO *and* HOUSE TRAILER

☆ THIS type of toy is well liked among the youngsters because of the disassembly feature. The wheels are of the same design and size as those used on the Auto Toy, on page 38. Both bodies and trailer top are cut from $1\frac{3}{4}$ inch hardwood stock. The easiest way to lay out the design is to draw $\frac{1}{4}$ inch squares on the line drawing to the right, and $\frac{1}{2}$ inch squares onto another paper which can be used later on as a template for future use. Make sure all sharp corners have been broken off with sandpaper. Sand smooth and apply bright colored enamels.
